

SUMMARY

Data Analyst with **4+ years** of experience delivering data-driven solutions across financial services and digital product analytics, using **Python (Pandas, NumPy)**, **SQL**, **Tableau**, **Power BI**, **Snowflake**, and **AWS** to process large-scale trading and user datasets; **applies data modeling**, **ETL pipelines**, query optimization, and data quality validation to support P&L analysis, risk metrics (VaR), exposure reporting, cohort analysis, and KPI tracking across multi-asset and application environments.

TECHNICAL SKILLS

- **Programming Languages & Querying:** Python (Pandas, NumPy), SQL (Window Functions, CTEs, Joins, Aggregations)
- **Data Analysis & Visualization:** Tableau, Power BI (DAX, Data Modeling), Excel (Power Query, VBA, Pivot Tables), Google Sheets (Advanced Formulas)
- **Data Processing & ETL:** Alteryx, Snowflake, AWS Glue, ETL Pipelines, Data Transformation, Data Ingestion, Batch Processing, Workflow Automation
- **Databases & Data Warehousing:** MySQL, Amazon Redshift, Snowflake Data Warehouse
- **Cloud Platforms:** AWS (S3, Glue), Cloud Data Storage, Distributed Data Processing
- **Data Quality & Governance:** Great Expectations, Data Profiling, Data Validation, Data Integrity Checks, Data Quality Monitoring
- **Data Modeling & Analytics Techniques:** Data Modeling, Schema Design, Schema Normalization, Cohort Analysis, KPI Tracking, Trend Analysis, Root Cause Analysis, Exploratory Data Analysis (EDA)
- **Query Optimization & Performance Tuning:** Query Optimization, Indexing, Partitioning, Execution Plan Analysis, Performance Tuning
- **Business & Financial Analytics:** P&L Analysis, Risk Analytics (VaR), Exposure Analysis, Revenue Analysis, Financial Reporting
- **Reporting & Dashboarding:** Dashboard Development, Report Automation, KPI Reporting, Data Storytelling
- **Data Engineering Fundamentals:** Data Pipelines, Data Integration, Data Lifecycle Management, Structured & Semi-Structured Data Handling

PROFESSIONAL EXPERIENCE

Morgan Stanley
Data Analyst

USA
Aug 2025 – Current

- Engineered **Python (Pandas)** and **SQL** pipelines to process **2M+ monthly** multi-asset trading and transaction records, applied **data modeling** and schema normalization to unify risk and front-office inputs, reducing reconciliation time by **18 hours** per month.
- Developed **Tableau** dashboards to track **P&L, VaR, and exposure metrics**, translated trading desk inputs into calculated fields, enabling monitoring of **130 daily positions** with reduced manual review time.
- Automated **ETL workflows** using **Alteryx** and **Snowflake**, implemented ingestion, transformation, and validation logic for 7 market data feeds, **eliminating 24 manual validation steps** per release cycle and improving data load consistency.
- Tuned complex **SQL queries** on **Amazon Redshift**, applied **query optimization, indexing, and partitioning techniques**, improving execution plans and decreasing report generation latency by **35 minutes** across 10 scheduled batch jobs.
- Executed **data quality validation** using **Great Expectations** and **Python**, performed **data profiling** and rule checks across 30 datasets, preventing **1,400 incorrect records** from entering production reporting systems.
- Generated financial reports using **Power BI** and **Excel (Power Query, VBA)**, conducted **root cause analysis** on revenue anomalies across 6 reporting entities, **resolving 22 discrepancies** during quarterly reporting cycles.

Robosoft Technologies
IND

Data Analyst
Jul 2019 - Dec 2022

- Analyzed application usage data using **MySQL (joins, aggregations)** and **Excel (pivot tables)**, applied **cohort analysis** to refine event tracking, improving reporting accuracy across **15+ product** modules.
- Built reports using **Power BI (DAX, data modeling)**, applied **data visualization** and **dashboard design** to structure datasets, enabling tracking of **80K monthly user** events and reducing manual reporting effort by **12 hours** per cycle.
- Processed raw log data using **Python (NumPy)**, performed data wrangling and transformation to standardize formats and handle missing values, improving data readiness across **20+ datasets used in weekly reporting**.
- Deployed data ingestion workflows on **AWS (S3, AWS Glue)**, implemented pipeline orchestration and job scheduling for telemetry data, supporting ingestion of **1.5+M records per month** with consistent batch processing and data availability.
- Audited relational datasets using **SQL constraints and validation queries**, conducted **data auditing** and **data integrity checks**, resolving **900+ data issues** before production releases.
- Produced reports using **Google Sheets (advanced formulas, lookup functions)**, applied **KPI tracking** and **trend analysis** on campaign data, enabling monitoring of **25+ KPIs** across monthly reviews.

EDUCATION

The University of Texas, Dallas

Master of Science, Business Analytics and Artificial Intelligence
Jan 2023 - Dec 2024

CERTIFICATIONS

- Deep Learning Specialization - DeepLearning.AI
- AWS Data Analytics Fundamentals - Amazon Web Services
- Data Modeling in Power BI - Microsoft

PROJECTS

Ad Click Likelihood Estimator [Link](#)

- Investigated advertising logs containing **480K search-click events** using Python EDA to identify **62 high-value keywords**, enabling refinement of ad relevance scoring models and elevating prediction accuracy by **0.26 AUC** across multiple ad groups.
- Constructed regression-driven click likelihood models with engineered features and low-latency scoring logic, improving baseline model discrimination by **0.26 AUC** and supporting profit-optimized ad ranking decisions for **9 campaign clusters**.

AI-Driven Demand Forecasting Engine

- Developed a forecasting pipeline using Python, SQL, and Prophet to process **18M retail transactions**, generating daily demand signals for **120 product categories** that helped supply teams prevent **4,500 stockout cases** across regional hubs.
- Built a Power BI command center with **15 integrated forecast views**, enabling operations leaders to compare predictions across **38 warehouses** and retrieve inventory insights in **under 6 seconds** during replenishment cycles.
